CONCRETE BENCH 185

872.00 €

This bench model is part of the product range oriented towards open urban spaces. An elegant extension of concrete bench model 157, combined with the warmth of certified wood. The bench is made of high-performance reinforced fiber concrete and natural aggregate. The structure is finished in different color combinations and consists of natural marble or granite aggregates. The seating area is specially designed and does not allow water to be retained under the wooden elements. This engineering solution and the protection coating on the wooden planks prolongs their life and prevents them from rotting. All concrete surfaces are polished and varnished, which makes the product even more resistant to aggressive weather conditions. A practical solution for modern urban spaces.
