CONCRETE BENCH 248 PS polished aggregate

2,483.00 €

Bench with backrest from the product range of concrete benches by Encho Enchev - ETE with a characteristic design, giving it individuality and style. The bench is made out of high-performance reinforced fiber concrete and polished aggregate. The marble and granite stones that form the aggregate structure are natural and have the opportunity for different color variations. The metal components making up the seat and back of the bench are made of stainless steel. The concrete bench is combined with certified, hard bamboo wood. The additional treatment of the polished surface with a special, protective coating makes the product even more resistant to aggressive weather conditions and reduces the deposition of dirt. The bench is a modern decoration to the city exterior (for parks, alleys, public spaces, playgrounds and gardens). The carefully selected exotic wood brings the close to nature feeling. A new design solution that relies on the proportion and balance between two different materials. A product that satisfies even the most sophisticated landscape architectural requirements.
