CONCRETE PLANTER 230 exposed aggregate

866.00 €

Model in the product range of concrete planters by Encho Enchev - ETE in the elegant rhomboid shape. The flower pot is made of high-performance concrete and an aggregate of natural marble or granite stones. The particles that make up the aggregate are precisely defined in size and can be combined in different colors. With the modern techniques of processing the aggregate structure a surface with a characteristic relief is created. A special protective coating is applied on the embossed surface. The innovative solution is decorated with a delicate, horizontal channel. The concrete planter is especially practical and suitable for creating flower alleys in parks, and the functionality is revealed when using it as a "green" anti-parking. An ideal solution for arranging spaces in hotels, private properties and gardens. A timeless product. The durability of the planter is in sync with the clean lines and elegant silhouette. The natural colors of the aggregate are perfectly combined with different plant compositions.
