CONCRETE BENCH 268 G ES exposed aggregate

1,449.00 €

The **268-G** bench model is made from high-strength fiber-reinforced concrete with a homogeneous structure of natural marble or granite stones. The structural aggregates are precisely sized and come in various color combinations, setting the main textures: white, scatter, gray, or brown. The stylishly curved form combined with the delicate relief of the embossed surface is complemented by the natural warmth of the wood. The metal components making up the seat and back of the bench are made of stainless steel. The seat and backrest are made of premium wood, available in two options: spruce or **eco-friendly Resysta® wood**. Developed in Germany, this innovative material is 100% recyclable and eco-friendly, offering a **15-year warranty** against cracking and delamination (provided by the manufacturer). The treatment of the wooden elements and the concrete surface with protective coatings provides additional resistance to atmospheric influences. Thanks to the curved form of the bench, a circle with an outer diameter of 4 meters can be described when combining 6 modules of the same type or with other curved modules from the 268 series. The **268-G** concrete bench can be used both independently and in combination with other modules of the model, offering various solutions for creating beautiful and functional park spaces.
