Concrete Benches 268 P seat polished, sides exposed aggregate

866.00 €

Concrete Bench **Model 268-P** – a component of the **Modular Concrete Bench Model 268**. It can be used both independently and in combination with the other modules of the model. The bench is made of high-strength fiber-reinforced concrete with a homogenous aggregate structure. The aggregate particles have a defined size and can be combined in various color combinations defining the primary textures: white, speckled, grey, or brown. The seating area is polished, while the sides have a subtle embossed structure. The fine polishing gives a velvety touch sensation, and the relief sides highlight the texture's features and provide a distinctive individuality. Additional protective coatings applied to the surfaces extend the concrete's operational indicators and give it even greater resistance to aggressive environmental conditions. The elegantly curved shape offers various solutions for creating beautiful and functional park spaces.
